1 Research Projects and Special Grants

The following research projects were coordinated by CAMGSD members in 2017:

Categorification, quantization and knots

(Started: January 1, 2017, duration: 60 months)

Funding agency: Fundação para a Ciência e a Tecnologia

Reference: Exploratory research project associated to the "FCT Investigator" Program, Ref. IF/00998/2015

Researcher: Marko Stošić

The principal goal of this research project is to study the concepts of categorification and quantization, in particular in the context of quantum polynomial link invariants. The main line of this interdisciplinary proposal comes from surprising and exciting connections between the knot theory and homological knot invariants on the mathematical side, and quantum field theory and string theory on the physics side, with outcomes in other fields, like number theory or spectral curves.

CoLab Program UT Austin | Portugal

Funding agency: Fundação para a Ciência e a Tecnologia

The Center for Mathematical Analysis, Geometry, and Dynamical Systems has been one of the main participants in this collaborative program between Portuguese Universities and the University of Texas at Austin since the program was initiated in 2007.

Defects: a bridge between Geometry and Physics

(Started: February 1, 2015, duration: 60 months)

Funding agency: Fundação para a Ciência e a Tecnologia

Reference: Exploratory research project associated to the "FCT Investigator" Program, Ref. IF/01426/2014/CP1214/CT0001

Researcher: Michele Cirafici

The aim of this project is to investigate the mathematical structures associated with defects in quantum field theory. The question addressed are the properties of BPS enumerative invariants which arise in the presence of defects and their relation with wall-crossing structures.

Derivation of macroscopic PDE's from kinetic theory (mesoscopic) and from interacting particle systems (microscopic)

(Started: January 1, 2017, duration: 24 months)

Funding agency: Fundação para a Ciência e a Tecnologia and Égide (France).

Principal Investigator: Patrícia Gonçalves (CAMGSD-IST)

Number of participants: 4 (Portugal) + 4 (France)

In this research project we want to obtain an hydrodynamic limit in different contexts starting from a microscopic description (stochastic models) or from a mesoscopic description (Boltzmann equation). Two different types of systems will be considered, namely, systems which are described by a Boltzmann type equation for which a chemically reactive mixture of different constituents is considered; and systems with some conserved quantities, one or several, as the chains of coupled oscillators and exclusion processes with long jumps where one can investigate the anomalous fractional diffusion type limit. In the former type of systems we want to investigate the effects of the mixture and the influence of the chemical reaction in the different types of hydrodynamic limits. In the latter type of systems, we want to investigate the presence of an anomalous diffusion of fractional type and establish the crossover between different diffusion regimes.

Dispersive Evolution Equations

(Started: March 1, 2016, duration: 2+1 years)

Funding agencies: FCT-Portugal and CAPES-Brazil (Coordenação de Aperfeiçoamento de Pessoal de Nível Superior)

Coordinator at IST: Jorge Drumond Silva

Number of participants: 3 (Portugal) + 7 (Brazil)

The project is concerned with wave propagation in dispersive media. The aim is to investigate dispersive models arising, e.g., in Fluid Mechanics and Plasma Physics, and study their properties such as local and global well-posedness, stability of solutions and finite time singularities.

Global Properties of Solutions of the Einstein Equations

(Started: January 1, 2016, duration: 3 years)

Funding agency: Fundação para a Ciência e a Tecnologia

Reference: TDC/MAT-ANA/1275/2014

Principal investigator: João L. Costa

Local Coordinator at IST: Jorge Drumond Silva

Number of participants: 13

The main goal of the project is the study of global properties of solutions of the Einstein equations, especially in what concerns cosmic censorship and the formation of singularities in general relativity. This requires the use of techniques of geometry and analysis, particularly hyperbolic partial differential equations.

Hydrodynamic Limits and Equilibrium Fluctuations: universality from stochastic systems

(Started: December 1, 2016, duration: 5 years)

Funding agency: European Research Council - Starting Grant

Contract number: 715734

Principal investigator: Patricia Gonçalves

Other participants: 7 (3 postdoctoral, 2 PhD and 2 MSc students)

The research project aims at characterizing the universality of the macroscopic behavior of some physical systems from underlying microscopic stochastic dynamics, by deriving the macroscopic laws, namely, (stochastic) partial differential equations, which govern the space-time evolution of the thermodynamic quantities of those physical systems.

Quantization and Kahler Geometry

(Started: April, 1, 2016, duration: 36 months)

Funding agency: Fundação para a Ciência e a Tecnologia

Reference: PTDC/MAT-GEO/3319/2014

Principal investigator: João Pimentel Nunes

Number of participants: 7

The project studies the relations between Kahler geometry and geometric quantization. The focus is on degenerating families of Kahler metrics, in the space of Kahler metrics for a fixed cohomology class equipped with the Mabuchi metric, and relations to both Kahler and real polarizations in quantization.

Quantum Structure of Spacetime

(Started: April 30, 2015, duration 48 months)

Funding agency: EU

Reference: COST Action MP1405

Member of the Management Committee: José Mourão

Substitute Member of the Management Committee: Roger Picken

Number of CAMGSD participants: 7

Noncommutative geometry (NCG) is at the heart of quantum physics, and its many facets and developments have widely influenced both physics and mathematics. This Action aims to create a Network with world experts from across Europe in the interconnected research subjects of NCG and gravity. As data emerges from Cosmic Microwave Background and quantum interferometry experiments, a prime objective of the Action will be to seek measurable signatures of quantum spacetime.

Riemannian and Kähler Geometry on Toric Manifolds

(Started: May 1, 2016, duration: 3 years)

Funding agency: Fundação para a Ciência e a Tecnologia

Reference: PTDC/MAT-GEO/1608/2014.

Principal investigator: Rosa Sena-Dias

Other participant: Miguel Abreu

Toric Manifolds are particular Kähler Manifolds but have extremely rich geometric behavior. This project's motto is to use Toric Manifolds as testing ground for two of the main questions in Geometry, namely: is a Riemannian Manifold determined by its spectrum? And, what is the best metric on a Manifold?

Scaling Limits for particle systems with long jumps

(Started: January 1, 2017, duration: 12 months)

Funding agency: Fundação das Universidades Portuguesas (CRUP) and PAULIF (France)

Participants: Patrícia Gonçalves (CAMGSD-IST), Cédric Bernardin and Byron Jyménez-Oviedo (University of Nice).

The thesis of Byron Oviedo is devoted to the derivation of the hydrodynamic and the hydrostatic limit of the exclusion process with long jumps in contact with infinitely many reservoirs. The jump rate is described by a transition probability p which is symmetric and has a long tail. Two cases are considered: 1) the transition probability rate p has finite variance, it is proved that the time evolution of the spatial density of particles is described by some partial differential equations with various boundary conditions; 2) the probability transition rate p has infinite variance, and it is obtained a collection of regional fractional reaction-diffusion equations with Dirichlet boundary conditions. It is also analyzed the convergence of the unique weak solution of these equations when a parameter is taken to zero and to infinity.

Two Related Topics in Clifford Analysis

(Started: January 1, 2015, duration: 36 months)

Funding agency: Macau Government, Fundo para o Desenvolvimento das Ciências e da Tecnologia (FDCT)

Reference: FDCT 099/2014/A2

CAMGSD participants: José Mourão (Co-PI) and João P. Nunes

The main objective of the project, in broad terms, is to understand the role of Clifford time in quantization. It is expected that this will also find an interesting application of the (existing and developing) research in Clifford analysis, by linking it to geometry and quantization. These developments are expected to be analogs of the important role of complex time in quantization and geometry.

2 Visitors

The following researchers visited the Center in 2017:

Rui Albuquerque, Universidade de Évora, January 10

Ieke Moerdijk, Universiteit Utrecht, January 20

Mahendra Pantee, Universidade Estadual de Campinas, January 20

Urs Schreiber, Czech Academy of Sciences, January 20

Sari Ghanem, Max-Planck-Institut für Gravitationsphysik, January 27

Minna Salminen Karlsson, Uppsala universitet, January 30-February 3

Capitolina Díaz, Universitat de València, January 30-February 3

Daniel Gonçalves, Universidade Federal de Santa Catarina, February 7

Oguzhan Kaya, Galatasaray University, February 13

José Ricardo Oliveira, University of Nottingham, February 15

André Gama Oliveira, CMUP, February 21

Pascal Lambrechts, Université catholique de Louvain, Feb. 22-March 10

Thomas Johnson, Imperial College, February 23-26

Katrin Wendland, Universität Freiburg, February 27

Peter Hintz, University of California at Berkeley, March 5-8

Aleksandar Mikovic, Universidade Lusófona, March 8

Nicola Abatangelo, Université Libre de Bruxelles, March 10

Cristiano Spotti, Aarhus Universitet, March 13-15

Cho-Ho Chu, Queen Mary University of London, March 18

C. Martin Edwards, University of Oxford, March 21-31

Ricardo Campos, ETH Zürich, March 31-April 5

Juliana Pimentel, UFABC, April 4

Vishnu Jejjala, University of the Witwatersrand, April 17

Tom Gustafsson, Aalto University, April 18-26

Adam Levi, Technion – Israel Institute of Technology, April 23-28

Lucile Vandembroucq, Universidade do Minho, April 26

Claude Warnick, Imperial College, April 26-29

Kamila Klis Garlicka, CYFRONET AGH - Krakow, April 26-May 6

Marel Ptak, CYFRONET AGH - Krakow, April 26-May 6

Valentin Reys, Università degli Studi di Milano-Bicocca, May 8

Paul Wedrich, Imperial College London, May 20-24
Tobias Weth, Goethe-Universität Frankfurt, May 26-June 2
Paulo Lima Filho, Texas A&M University, May 31-June 13
Emmanuel Wagner, Université de Bourgogne, June 6-9
Louis H. Kauffman, University of Illinois at Chicago, June 17-July 2
Gonçalo Oliveira, Duke University, June 27
Teresa Malheiro, Universidade do Minho, July 2-6
Ana Pires, University of Fordham, New York, July 2-30
Bruno Oliveira, University of Miami, July 5-31
Francesco Russo, Università degli Studi di Catania, July 9-14
Rachi El Harti, Université Hassan I, July 9-20
Edgar Costa, Dartmouth College, July 10-14
Gonçalo Oliveira, Duke University, July 10-14
André Neves, Imperial College London, July 10-15
Marco Robalo, Sorbonne Université, July 11-15
Inês Henriques, Sheffield University, July 12-13
Diogo Oliveira e Silva, Universität Bonn, July 12-15
Afonso Bandeira, NYU Courant, July 12-15
Joel Moreira, Ohio State University, July 12-16
Luis Abreu, Austrian Academy of Sciences, July 12-20
Rita Ferreira, KAUST, July 13-14

Igor Salom, University of Belgrade, December 14-25
Ana Ros Camacho, Universiteit Utrecht, December 18
Gonçalo Oliveira, IMPA, December 19

3 Seminar Series & Working Seminars

3.1 Algebra

Jan 20

Ieke Moerdijk. *University of Utrecht.* Shuffles and Trees.

Apr 03

Ricardo Campos. *ETH Zurich.* Configuration spaces of points and their homotopy type.

Oct 26

Geoffroy Horel. *Université Paris XIII.* Mixed Hodge structure, Galois actions and formality.

3.2 Analysis, Geometry, and Dynamical Systems

Feb 07

Daniel Gonçalves. *Universidade Federal de Santa Catarina.* Representations of graph algebras via branching systems and the Perron-Frobenius Operator.

Apr 04

Juliana Pimentel. *UFABC (Brazil).* Unbounded Attractors Under Perturbations.

Jun 20

Louis H. Kauffman. *University of Illinois at Chicago.* Reconnection, Vortex Knots and the Fourth Dimension.

Jun 27

Louis H. Kauffman. *University of Illinois at Chicago.* Knotoids and Virtual Knot Theory.

Jul 10

Francesco Russo. *University of Catania.* On (special versions of) the Hartshorne Conjecture on Complete Intersections.

Jul 12

Francesco Russo. *University of Catania.* Some loci of rational cubic fourfolds.

Jul 18

Rachid El Harti. *Université Hassan I.* C^* -algebra valued numerical range for adjointable operators and some applications.

Oct 17

Adriana Neumann. *Universidade Federal do Rio Grande do Sul.* Asymptotic behavior of the exclusion process with slow boundary.

Oct 24

David Krejcirik. *Czech Technical University in Prague.* Absence of eigenvalues of Schrödinger operators with complex potentials.

Oct 31

Daniel Rodrigues. *University of Groningen.* Percolation on the stationary distribution of the voter model on \mathbb{Z}^d .

Nov 02

Alexandre Boritchev. *Institut Camille Jordan, Université Lyon 1.* A random particle system and nonentropy solutions of the Burgers equation on the circle.

Nov 21

Leonardo de Carlo. *CAMGSD, IST.* Geometric and combinatoric structures in stationary Markov chains.

Dec 15

Otávio Menezes. *CAMGSD, IST.* Invariance principle for a slowed random walk driven by symmetric exclusion.

3.3 Geometria em Lisboa

Jan 10

Rui Albuquerque. *Universidade de Évora.* Riemannian 3-manifolds and Conti-Salamon $SU(2)$ -structures.

Feb 21

André Gama Oliveira. *CMUP.* Parabolic Higgs Bundles and Topological Mirror Symmetry.

Mar 13

Cristiano Spotti. *Centre for Quantum Geometry of Moduli Spaces, Aarhus.* Kähler-Einstein Fano varieties and their moduli spaces.

May 08

Thomas Baier. *CAMGSD, IST.* Higher rank Prym varieties and Hitchin's connection.

May 15

José Natário. *CAMGSD, IST.* A Minkowski-type inequality for convex surfaces in the hyperbolic 3-space.

Jun 27

Gonçalo Oliveira. *Duke University.* G_2 -instantons on noncompact G_2 -manifolds.

Jul 21

Nick Sheridan. *Princeton University.* Cubic fourfolds, K3 surfaces, and mirror symmetry.

Jul 21

Ana Rita Pires. *Fordham University, NY.* Symplectic embedding problems and infinite staircases, with some proofs.

Jul 26

Marta Batoréo. *Universidade Federal do Espírito Santo.* On periodic points of symplectomorphisms on closed manifolds.

Jul 26

Miguel Abreu. *CAMGSD, IST.* Contact topology of Gorenstein toric isolated singularities.

Sep 18

Ailsa Keating. *Cambridge University.* Examples of monotone Lagrangians.

Dec 05

Marcos Mariño. *University of Geneva.* Spectral theory and enumerative geometry.

Dec 07

Rui Loja Fernandes. *University of Illinois at Urbana-Champaign.* Associativity and Integrability.

Dec 19

Gonçalo Oliveira. *Instituto de Matemática Pura e Aplicada.* Instantons from vortices.

3.4 Microlocal Analysis

Feb 08 – Jul 19 (14 lectures)

Jorge Drumond Silva. *CAMGSD, IST.*

3.5 Partial Differential Equations

Jan 20

Mahendra Pantee. *Universidade Estadual de Campinas.* On well-posedness of some bi-dimensional dispersive models.

Jan 27

Sari Ghanem. *Albert Einstein Institute, Max-Planck Institute for Gravitational Physics.* The decay of spherically symmetric $SU(2)$ Yang-Mills fields on a black hole.

Feb 24

Thomas Johnson. *Imperial College London.* The linear stability of the Schwarzschild solution to gravitational perturbations in the generalised harmonic gauge.

Mar 06

Peter Hintz. *University of California at Berkeley.* Non-linear stability of Kerr-de Sitter black holes.

Mar 10

Nicola Abatangelo. *Université Libre de Bruxelles.* Keller-Osserman type solutions for the fractional laplacian.

Apr 26

Adam Levi. *Technion, Israel Institute of Technology* Regularization of the stress-energy tensor, and semi-classical effects in black holes.

Apr 28

Claude Warnick. *Imperial College London.* Linear fields on anti-de Sitter spacetimes.

May 31

Tobias Weth. *Goethe-Universität Frankfurt.* On the unique continuation property for sublinear elliptic equations.

Oct 06

Heinrich Freistähler. *University of Konstanz.* A Causal Five-Field Theory of Dissipative Relativistic Fluid Dynamics.

Oct 19

Levon Nurbekyan. *KAUST* First-order, stationary mean-field games with congestion.

Oct 25

Blake Temple. *University of California at Davis.* An Instability of the Standard Model of Cosmology Creates the Anomalous Acceleration Without Dark Energy.

Nov 02

Martin Taylor. *Imperial College London.* Global nonlinear stability of Minkowski space for the massive and massless Einstein-Vlasov systems.

Dec 06

Paul Tod. *University of Oxford.* Penrose's Weyl Curvature Hypothesis and his Conformal Cyclic Cosmology.

3.6 String Theory

Feb 27

Katrin Wendland. *Albert-Ludwigs-Universität Freiburg.* Reflections on $K3$ theories.

Mar 20

Suresh Nampuri. *CAMGSD, IST.* A Riemann-Hilbert approach to rotating attractors.

Apr 17

Vishnu Jejjala. *University of the Witwatersrand.* On the Shape of Things: From holography to elastica.

May 08

Valentin Reys. *University of Milano-Bicocca.* Exact entropy of 1/4-BPS black holes in $N = 4$ supergravity and the mixed Rademacher expansion.

Jul 17

João Rodrigues. *University of the Witwatersrand.* Constructing AdS_4 from 3 dimensional vector valued fields.

Nov 02

Gabriel Lopes Cardoso. *CAMGSD, IST.* Exact results in the STU model.

Nov 02

Suresh Nampuri. *CAMGSD, IST.* Hot Attractors and Area Laws.

Nov 13

Michele Cirafici. *CAMGSD, IST.* On two applications of persistent homology to string theory vacua.

Dec 04

Junya Yagi. *Perimeter Institute for Theoretical Physics, Waterloo.* String theory and integrable lattice models.

3.7 Topological Quantum Field Theory

Jan 20

Urs Schreiber. *Czech Academy of Sciences, Prague.* Duality in String/M-theory from Cyclic cohomology of Super Lie n -algebras.

Feb 15

José Ricardo Oliveira. *University of Nottingham.* EPRL/FK Asymptotics and the Flatness Problem: a concrete example.

- Mar 08**
Aleksandar Mikovic. *Universidade Lusófona.* Hamiltonian analysis of the BFCG theory for a generic Lie 2-group.
- Mar 22**
Pedro Boavida. *CAMGSD, IST.* Operads of genus zero curves and the Grothendieck-Teichmuller group.
- Apr 05**

Dec 18

Ana Ros Camacho. *Utrecht University.* Strangely dual orbifold equivalence for unimodal and bimodal singularities and Galois groups.

4 Conferences and short courses

The following Conferences and Short Courses were organized or co-organized by members of the Center in 2017:

Iberian Strings 2017

Técnico, Lisbon, Portugal, 16-19 January 2017

Organizing committee: Gabriel Cardoso (CAMGSD-IST), Michele Cirafici (CAMGSD-IST), Gianluca Inverso (CAMGSD-IST), Silvia Nagy (CAMGSD-IST), Suresh Nampuri (CAMGSD-IST), Ricardo Schiappa (CAMGSD-IST)

Quantum Spacetime '17

Porto, Portugal, 30 January – 3 February 2017

Organizing committee: José Mourão (CAMGSD-IST), Miguel Costa (FCUP), Orfeu Bertolami (FCUP), Florbela Martins (FCUP), João Viana Lopes (FCUP)

Workshop on Operator Theory, Complex Analysis, and Applications 2017 / WOTCA 2017

Instituto Superior Técnico, Lisbon, Portugal, 3–6 July 2017

Organizing committee: Cristina Câmara (CAMGSD-IST), Cristina Diogo (ISCTE-IUL and CAMGSD-IST) Teresa Malheiro (CMAT-UMinho), Ana Cristina Nata (IPT-Tomar and CMUC)

6th IST Lectures on Algebraic Geometry and Physics – 2017

Instituto Superior Técnico, Lisbon, Portugal, 10 - 12 July 2017

Organizing committee: José Mourão (CAMGSD-IST), João Pimentel Nunes (CAMGSD-IST)

Lectures:

Martin Schlichenmaier. *University of Luxembourg* A review of Berezin-Toeplitz quantization - I (February 23).

Martin Schlichenmaier. *University of Luxembourg* A review of Berezin-Toeplitz quantization - II (February 24).

Martin Schlichenmaier. *University of Luxembourg* A review of Berezin-Toeplitz quantization - III (February 25).

Global Portuguese Mathematicians

Técnico, Lisbon, Portugal, 13 - 14 July 2017

Organizing committee: Edgar Costa (Dartmouth College), José Mourão (CAMGSD-IST), Gonçalo Oliveira (Duke University)

Higher Structures Lisbon (deformation theory, operads, higher categories, developments & applications)

Instituto Superior Técnico, Lisbon, 24 - 27 July 2017

Organizing committee: Aleksandar Mikovic (GFM/UL, and Universidade Lusófona), Benjamin Alarcón Heredia (CMA-UNL), Björn Gohla (GFM-UL), John Huerta (CAMGSD-IST), João Faria Martins (University of Leeds), Roger Picken (CAMGSD-IST)

6th Workshop of the Seminar on Representation Theory and Related Areas

University of Algarve, 2 September 2017

Organizing committee: Marco Mackaay (CAMGSD-IST), Samuel Lopes (CMUP)

SiMBioS – Stochastic and Deterministic Mathematical Methods for Biological and Environmental Systems: Theory & Applications

Universidade da Madeira, 11-15 September 2017

Organizing committee: Wolfgang Bock (Universität Kaiserslautern), Joaquim Correia (Universidade de Évora), Fernando P. da Costa (Universidade Aberta and CAMGSD-IST), José Luís da Silva (Universidade da Madeira), Michael Grinfeld (University of Strathclyde), Youcef Mammeri (Université Picardie Jules Verne)

CAMGSD–CMAFCIO Differential Equations Meeting

FCUL, 14-15 September 2017

Organizing committee: Carlos Rocha (CAMGSD-IST), Luís Sanchez (CMAF-UL)

Entropy Methods in Particle Systems

Instituto Superior Técnico, Lisbon, Portugal, 13-16 November 2017

Organizer: Patrícia Gonçalves (CAMGSD/IST)

Lectures:

Milton Jara. *IMPA, Rio de Janeiro.* Continuous time Markov chains (November 13).

Milton Jara. *IMPA, Rio de Janeiro.* Entropy inequality (November 14).

Milton Jara. *IMPA, Rio de Janeiro.* Feynmann-Kac's formula and variational methods (November 15).

Milton Jara. *IMPA, Rio de Janeiro.* Particle Systems (November 15).

Milton Jara. *IMPA, Rio de Janeiro.* Yau's method and hydrodynamic limits (November 16).

Milton Jara. *IMPA, Rio de Janeiro.* Menezes's inequality and fluctuations (November 16).

Particle Systems and Partial Differential Equations VI

Université Nice Sophia Antipolis, France, 27 November – 1 December 2017

Organizing committee: Cédric Bernardin (UCA-Université Nice Sophia Antipolis), Maria Conceição Carvalho (CMAF-UL), Patrícia Gonçalves (CAMGSD-IST), Ana Jacinta Soares (CMAT-Universidade do Minho)

5 Seminars given by members of the Center

The following seminar talks, invited lectures or short courses were given by members of the Center in 2017:

Miguel Abreu, On the mean Euler characteristic of Gorenstein toric contact manifolds, Joint Symplectic Seminar IMPA-UFRJ-UFF-PUC, Rio de Janeiro, Brazil, March 27.

Miguel Abreu, On the mean Euler characteristic of Gorenstein toric contact manifolds, Session on Symplectic-Poisson Geometry, IV Joint Meeting RSME-SMM, Valladolid, Spain, June 19-22.

Miguel Abreu, Contact topology of Gorenstein toric isolated singularities, Workshop on Interactions of symplectic and algebraic geometry, University of Warwick, UK, July 31 - August 4

Miguel Abreu, Contact topology of Gorenstein toric isolated singularities, Workshop on Interactions of symplectic and algebraic geometry, Workshop on Conservative Dynamics and Symplectic Geometry, IMPA, Rio de Janeiro, Brazil, August 7-11.

João Ferreira Alves, Spectral Invariants of Markov Periodic Systems, PODE 2017 (Progress on Difference Equations), Università di Urbino, Italy, May 29.

Margarida Baía, A degenerate elliptic-parabolic system arising in competitive contaminant transport, Workshop on Mathematics in memory of Graça Carita, Universidade de Évora, March 3.

Pedro Boavida de Brito, Operads of genus zero curves and the Grothendieck-Teichmuller group, University of Copenhagen, Denmark, March 28.

Pedro Boavida de Brito, On En , Workshop on infinity-operads, Universität Osnabrueck, Germany, July 12-14.

Maria Cristina Câmara, Truncated Toeplitz operators, Mathematical aspects of the physics with non-self-adjoint operators, CIRM, Marseille, France, June 5-9.

Maria Cristina Câmara, Conjugations and asymmetric truncated Toeplitz operators, XIV Advanced Course in Operator Theory and Complex Analysis, Instituto de Ciencias Matemáticas, Madrid, Spain, June 19-22.

Maria Cristina Câmara, The Riemann-Hilbert method: from Toeplitz operators to black holes, Encontro Ciência 2017, Centro de Congressos de Lisboa, Lisbon, Portugal, July 4.

- Maria Cristina Câmara, Truncated Toeplitz operators and their spectra, ILAS 2017: MS-23 Toeplitz matrices and Riemann-Hilbert problems, Iowa State University, Ames, USA, July 24-28.
- Gabriel Lopes Cardoso, Exact results in the STU model, COST Workshop Quantum Spacetime '17, Porto, Portugal, January 30-February 3.
- Gabriel Lopes Cardoso, Exact results in the STU model, Eighth Joburg Workshop on String Theory, Johannesburg, South Africa, March 27-31.
- Gabriel Lopes Cardoso, A double copy for $N=2$ supergravity in four dimensions, Supergravity 2017, Padova, Italy, May 18-19.
- Gabriel Lopes Cardoso, A Riemann-Hilbert approach to black hole solutions, CIRM Workshop Mathematical Aspects of the Physics with Non-Self-Adjoint Operators, Marseille, France, June 5-9.

6 Postdoctoral program and research fellows

The Center started its own postdoctoral program in the 1998-99 academic year. Positions are granted for 12 months, with possibility for extension for a second year. Applicants must hold a PhD degree in mathematics, or in another field relevant to the research interests of the Center, awarded preferably less than two years before the opening date of the position. To be considered for a position, an applicant must show very strong research promise in one of the main areas of activities of the Center. No teaching duties are associated with these positions. The vacancies are advertised internationally in the European Commission Euroaxess, the European Mathematical Society and the American Mathematical Society web sites, leading yearly to about 100 applications.

The Center also hosts research fellows and postdocs funded by other programs. The list of all our postdoctoral trainees since 1998 is available at:

<http://camgsd.ist.utl.pt/posdoc.php.en>

The following postdoctoral students or research fellows were hosted by the Center in 2017:

Artur Alho, PhD in Mathematics, Universidade do Minho, 2012. Research areas: General Relativity – future and past asymptotics of cosmological models, spherically symmetric collapse with positive cosmological constant. Supported by an FCT postdoctoral grant (April 2013–March 2019).

Thomas Baier, PhD in Mathematics, Instituto Superior Técnico, 2009. Research areas: Kähler geometry and quantization. Supported by an FCT project grant (April 2016–March 2019).

Pedro Boavida de Brito, PhD in Mathematics, WWU-Münster & University of Aberdeen, 2014. Research areas: Algebraic Topology. Supported by an FCT postdoctoral grant (Dec. 2015–Nov. 2018).

Farid Bozorgnia, PhD in Applied Mathematics, Royal Institute of Technology, Stockholm, Sweden, 2009. Research Areas: partial differential equations, calculus of variations, spectral theory. Supported by the UT Austin/Portugal Program (August 2010–Nov. 2011) and by an FCT postdoctoral grant (June 2012–February 2017).

Michele Cirafici, PhD in Physics, SISSA Trieste, 2004. Research areas: string theory, quantum field theory, geometry. Supported by the CIÊNCIA 2008 Program (Sep. 2009–Aug. 2014), by CAMGSD (Oct.-Dec. 2015) and by an FCT Investigador Grant (Feb. 2015- Jan. 2020).

- Luís Filipe Costa**, PhD in Physics, Universidade do Porto, 2012. Research areas: General Relativity – gravitomagnetic effects, dynamics of extended test bodies, gravito-electromagnetic analogies. Supported by an FCT postdoctoral grant (May 2013–April 2019).
- Leonardo De Carlo**, PhD in Mathematics, Gran Sasso Science Institute, 2017. Research Areas: Interacting Particles Systems. Supported by an ERC project grant (Sept. 2017–Dec. 2017).
- João Esteves**, PhD in Physics, IST, 2011. Research area: Combinatorics and its applications to Topological Quantum Field Theory. Supported by a CAMGSD postdoctoral grant (Nov. 2011–Jan. 2012) and by an FCT postdoctoral grant (Feb. 2012–Jan. 2018).
- Anne Franzen**, PhD in Theoretical Physics, Utrecht University, 2015. Research areas: General Relativity: wave equation in black hole backgrounds, perturbations of black holes. Supported by a CAMGSD postdoctoral grant (Jan. 2016–Dec. 2017).
- John Huerta**, PhD in Mathematics, University of California, Riverside, 2011. Research areas: foundations of supersymmetry, applying higher gauge theory to superstrings, supermembranes and supergravity. Supported by a CAMGSD postdoctoral grant (Jan. 2013–June 2014) and by an FCT postdoctoral grant (July 2014–July 2020).
- Gianluca Inverso**, PhD in Physics, Università di Roma Tor Vergata, 2013. Research areas: String Theory. Supported by a CAMGSD postdoctoral grant (Sept. 2016–August 2017).
- Otávio de Macedo Menezes**, PhD in Mathematics, Instituto Nacional de Matemática Pura e Aplicada, 2017. Research Areas: Interacting Particles Systems. Supported by an ERC project grant (Nov. 2017–Nov. 2018).
- Silvia Nagy**, PhD in Physics, Imperial College London, 2015. Research areas: Mathematical Physics, String Theory. Supported by a CAMGSD postdoctoral grant (Sept. 2015–March 2017).
- Suresh Nampuri**, PhD in Physics, TIFR, 2012. Research areas: uncovering mathematical structures in the Hilbert space of quantum gravity. Supported by an FCT project grant (June 2015–May 2018).
- Moritz Reintjes**, PhD in Applied Mathematics, University of California at Davis, 2011. Research areas: General Relativity, Theory of Shock Waves, Mathematical Physics. Supported by an FCT project grant (Jan. 2017–Dec. 2017).

Alberto Saldaña, PhD in Mathematics, Frankfurt University, 2014. Research areas: Partial differential equations. Supported by a CAMGSD postdoctoral grant (August 2016–April 2017).

Marco Stosic, PhD in Mathematics, IST, 2006. Research areas: knot invariants and categorification. Supported by an ERC grant and by CAMGSD (Jan. 2015–Dec. 2017).

Giorgio Trentinaglia, PhD in Mathematics, Utrecht University, 2008. Research areas: complex analytic geometry, Hodge theory, Mumford-Tate groups, Lie groups and groupoids, orbifolds, foliations, differentiable stacks, representation theory, Tannaka duality, categorical algebra. Supported by an FCT postdoctoral grant (Oct. 2012–Sept. 2018).

7 Student supervision

7.1 Graduate students

The following graduate students were supported by CAMGSD or FCT project fellowships in 2017:

Miguel Pereira MSc student, fellowship supervised by João Pimentel Nunes (01/09/2016 - 31/08/2017)

Frederico Toulson MSc student, fellowship supervised by Juha Videman (15/11/2016 - 14/11/2017)

Luís Duarte MSc student, fellowship supervised by Lina Oliveira (15/11/2016 - 14/11/2017)

Miguel Santos LMAC student, fellowship supervised by Henrique Oliveira (12/12/2016 - 11/12/2017)

Miguel Moreira LMAC student, fellowship supervised by Miguel Abreu (12/12/2016 - 11/12/2017)

8 Publications in 2017

10 Partnership and outreach

Participation in the Programme **Novos Talentos em Matemática**

Supervision of research projects carried out by talented undergraduate students funded by ten month scholarships from the Gulbenkian Foundation.

Participation in the **IST Winter School for Undergraduates**

Escola de Inverno de Matemática 2017 (EIM2017), IST, February 6–8, 2017.

Outreach activities by individual members

Anne Franzen lectured the course *General Relativity without Calculus* at the AstroCamp 2017 organized for high school students at the Centre for Environmental Education and Interpretation of the Corno de Bico in August 2017.

Fernando Pestana da Costa gave a short course on *Infinite-dimensional dynamical systems and coagulation-fragmentation equations* at the CIMPA School "Introduction to the mathematical analysis of differential equations and real-life applications", Centre Internationale de Mathématiques Pures et Appliquées, Nice, France / National University of Laos, Vientiane, Laos, January 2017.

Fernando Pestana da Costa delivered a short course *An introduction to ordinary differential equations* in the workshop "Training on Mathematics (TryMaths): an introduction to mathematical analysis with real life problems", Faculty of Natural Sciences / Faculty of Education, University of Savannakhet, Savannakhet, Laos, January 23-27, 2017.

Fernando Pestana da Costa gave a short course on *First order partial differential equations: method of characteristics and weak solutions*, Department of Mathematics, Faculty of Natural Sciences, National University of Laos, Vientiane, Laos, February 6-15, 2017.

Fernando Pestana da Costa gave a short course on *Bifurcation problems in liquid crystal cells*, Department of Mathematics, Faculty of Natural Sciences, National University of Laos, Vientiane, Laos, February 17-24, 2017.

Fernando Pestana da Costa gave a free course on *Harmonic Analysis and Applications*, Department of Mathematics, Faculty of Natural Sciences, National University of Laos, Vientiane, Laos, February 28 - May 5, 2017.

Fernando Pestana da Costa gave a free course (30 hours) on *Differential equations in population models*, Department of Mathematics, Faculty of Natural Sciences, National University of Laos, Vientiane, Laos, June 5 - July 14, 2017.

Gustavo Granja, member of the steering committee of the undergraduate research program *Novos Talentos em Matemática* sponsored by the Gulbenkian Foundation.

Roger Picken gave a workshop on Dance and Mathematics as part of the *Jornadas de Matemática*, organized by the IST mathematics students and dedicated to the theme Mathematics and the Seven Arts in April 2017.

João Pimentel Nunes gave the talk *O Teorema da Bola Cabeluda*, at the IST Summer Academy for the 7-10th grade students, in July 2017.

Hugo Tavares organized (jointly with Catarina Santa-Clara Gomes and Isabel Ferreira) the *Clube C-infinito*, a math club at FCUL-ULisboa.

Hugo Tavares acted as a consulting/scientific reviewer of the high school manuals of the Portuguese 7th grade students. Publishing House: Santillana.

11 Personal notes

Miguel Abreu visited the Universidade Federal do Rio de Janeiro, Brazil, from March 7 to March 30, 2017, as a Special Visiting Professor funded by a CNPq grant.

Fernando Pestana da Costa was elected by the Comissão Nacional de Matemática as the representative of Portugal to the International Commission on Mathematical Instruction of the International Mathematical Union.

Fernando Pestana da Costa visited the National University of Laos, Vientiane, Laos, from December 27, 2016, to July 14, 2017, as a postdoc funded by a Erasmus Mundus grant EMMA.

Fernando Pestana da Costa was a supervisor of two MSc theses in Applied Mathematics, completed at the Faculty of Natural Science of the National University of Laos, Vientiane, on 10 July 2017 by Kedtysack Xayxanadasy (Thesis title: Some ordinary differential equation problems in liquid crystal cells) and by Khankham Vongsavang, (Thesis title: Burger's equation and some applications).

Fernando Pestana da Costa is on sabbatical leave during the academic year 2017-18.

Patrícia Gonçalves is a member of the Scientific Council of IST.

Patrícia Gonçalves visited Institut Henri Poincaré in Paris from 12th April to 12th July.

Patrícia Gonçalves was selected as one of the Women in Science by Ciência Viva, Portuguese Agency promoting Science and Technology.

Patrícia Gonçalves co-organized the thematic session "Interacting Particle Systems" at the International conference 39th Meeting on Stochastic Processes and their Applications held in Moscow, Russia in 24-28 July 2017.

Gustavo Granja was a co-organizer of the Summer school on Algebraic Topology, Lisbon, July 24-28.

José Natário served as president of the Portuguese Society on Relativity and Gravitation.

Roger Picken was a member of the Scientific Committee of the XXVI International Fall Workshop on Geometry and Physics, Universidade do Minho, Braga, Portugal, September 4-7, 2017.

Carlos Rocha is a member of the Scientific Council of IST and the Senado da Universidade de Lisboa in the biennium 2017-19.

Carlos Rocha is on sabbatical leave during the academic year 2017-18.

Carlos Rocha was a Visiting Researcher in the Research Group on Nonlinear Dynamics, Freie Universität Berlin from October 15 to November 12, 2017.

Carlos Rocha coordinated (jointly with Luís Sanchez) the Mathematics Panel - Waves, Geometry, Dynamics, Operators and Models at the Ciência '17 Meeting, in July 3-5, 2017.

Carlos Rocha acted as an external reviewer for the PhD theses of Phillip Lappicy (Freie Universität Berlin) on April 28, and Hannes Stuke (Freie Universität Berlin) on May 29, 2017.

Juha Videman was a member of the Scientific Committee of MARINE 2017 – Seventh International ECCOMAS Conference on Computational Methods in Marine Engineering, Nantes, France, Maio 15–17, 2017.

Juha Videman visited the Department of Mathematics of the Aalto University, Finland, from September 10 to November 10, 2017, as a visiting scholar funded by a grant from the Finnish Society of Science and Letters.

Juha Videman is on sabbatical leave during the academic year 2017-18.
